CAREER OBJECTIVE

Computer Science graduate (2026) with AWS Cloud / DevOps training and hands-on project experience in Amazon EC2, S3, Elastic Load Balancing, CloudWatch and SNS. Seeking an entry-level Cloud Engineer role to apply cloud infrastructure, monitoring and networking skills in building and supporting reliable AWS environments.

PROFILE SUMMARY

- Working knowledge of AWS: EC2, S3, IAM, VPC, EBS, ELB, Auto Scaling, RDS, CloudWatch and SNS.
- Configured monitoring and alerting using Amazon CloudWatch alarms and Amazon SNS notifications.
- Strong networking fundamentals (TCP/IP, DNS, HTTP/HTTPS, SSH, subnetting) from CCNA training.
- Applied IAM roles, policies and least-privilege access; comfortable with Linux, Git, GitHub and Bash scripting.

TECHNICAL SKILLS

Cloud: AWS, AWS Management Console, Cloud Infrastructure
AWS Services: EC2, S3, IAM, VPC, CloudWatch, SNS, EBS, ELB, Auto Scaling, RDS
Operating Systems: Linux, Windows
DevOps & Version Control: Git, GitHub, CI/CD Fundamentals, Bash Scripting
Networking: TCP/IP, DNS, HTTP/HTTPS, SSH, IP Addressing, Basic Subnetting, Security Groups
Security: IAM Policies, IAM Roles, Least Privilege, Key-Based Authentication
Monitoring: Amazon CloudWatch, CloudWatch Alarms, Amazon SNS

PROJECTS

AWS Load Balancer & EC2 Application Deployment
Technologies: AWS EC2, Elastic Load Balancing (ELB), Security Groups, Linux

- Deployed application workloads on AWS EC2 instances and configured an Elastic Load Balancer for traffic distribution.
- Configured target groups and registered EC2 instances as backend targets.
- Configured security group rules to control inbound and outbound application traffic.
- Tested load distribution and application accessibility through the Load Balancer endpoint.
- Gained practical understanding of high availability, traffic distribution and scalable cloud architecture.

AWS EC2 Monitoring & Alerting System
Technologies: Amazon CloudWatch, Amazon SNS, AWS EC2, IAM, Linux

- Deployed and configured an AWS EC2 instance using the AWS Management Console.
- Configured Amazon CloudWatch to monitor CPU utilization and EC2 performance metrics.
- Created CloudWatch alarms based on defined resource utilization thresholds.
- Integrated Amazon SNS to send automated notifications when thresholds were triggered.
- Generated controlled workload on the EC2 instance to validate monitoring and alert thresholds.
- Documented a production-oriented monitoring and alerting workflow with basic cloud troubleshooting.

AWS S3 Static Website Hosting
Technologies: Amazon S3, AWS Management Console

- Created and configured an Amazon S3 bucket for static website hosting.
- Configured bucket permissions and static website settings.
- Uploaded and managed website files through the AWS Management Console.
- Applied AWS security concepts related to bucket access and permissions.

CERTIFICATIONS & TRAINING

- CCNA - Seven Mentor (2026)
- AWS Cloud / DevOps Training - IT Vedant (2026)

EDUCATION

Bachelor of Computer Science - Modern College of Arts, Science and Commerce, Ganeshkhind, Pune - 2026
HSC - Chhetan Dattaji Gaikwad Vidyalaya, Wai - 2023
